

Sustainable Resource Management Professional Certification Program

Accredited by the National Recycling Coalition; 3 CEUs San Jose State University

The Sustainable Resource Management Professional Certification Program, offered by GreenEducation.US, delivers 30 hours of online instruction covering the 25 principles, or student learning outcomes (SLO's), identified by the National Standards Certification Board of the National Recycling Coalition. (More information can be found at: <http://nrcrecycles.org/national-standards-certification-board/>)

The Sustainable Resource Management (CSRMP) certification course has been designed and is taught by leading experts in order to provide information on the policies, programs and infrastructure that support Zero Waste. Through SRM strategies, individuals, communities and businesses can learn how to reduce wasted resources, avoid product and transportation related greenhouse gas emissions and work to create a green economy.

This course is ideal for anyone working in these fields looking to gain a solid understanding of the policies, programs, systems, economics and infrastructure to collect, process and manage material resources.

Upon completion of this coursework, students will have gained all knowledge required to pass a comprehensive exam and receive a certificate as a Sustainable Resource Management Professional according to the National Recycling Coalition's National Standards Certification Board requirements.
